

Geography 6B — "Our Restless Earth"

Mock Unit Test Paper

地理 6B「無止境的地球」單元測驗：模擬試卷 · mirrors the teacher's question style

Time allowed 測驗時間：40 minutes 分鐘 **Total** 總分：55 marks 分 Name 姓名：_____ Class 班別：6B Date 日期：_____

Answer ALL questions. Write your answers in the spaces provided. 答畢所有題目，把答案寫在預留的空位上。

Section A — Fill in the Blanks 填充題

[14 marks]

A1. Complete the paragraph about the Earth's structure. 完成有關地球結構的段落。 (5)

The **lithosphere** consists of (A) _____ and (B) _____. It is broken into pieces called (C) _____. The narrow junction between two moving plates is called a (D) _____. The plates float and move slowly on the semi-fluid (E) _____.

A2. Complete the table of the three plate movements. 完成三種板塊運動的表格。 (9)

When plates move (F) _____, the internal force is (G) _____ and the boundary is called (H) _____.

When plates move (I) _____ each other, the internal force is (J) _____ and the boundary is called (K) _____.

When plates move (L) _____ each other, the internal force is (M) _____ and the boundary is called (N) _____.

Section B — Circle the Correct Answer 圈出正確答案

[6 marks]

B1. Divergent boundary $\leftarrow \rightarrow$ → circle one: Tension Compression Shear (1)

B2. Convergent boundary $\rightarrow \leftarrow$ → circle one: Tension Compression Shear (1)

B3. Transform boundary $\uparrow \downarrow$ → circle one: Tension Compression Shear (1)

B4. A **batholith** is an example of → circle one: intrusive volcanism extrusive volcanism (1)

B5. Hong Kong sits on the → circle one: Eurasian Plate Pacific Plate Philippine Plate (1)

B6. A four-figure grid reference is read → circle one:
eastings then northings northings then eastings (1)

Section C — Draw the Arrows 畫出箭咀

[6 marks]

C1. Name the **3 types of plate boundaries** and **draw an arrow to show the direction of plate movement** for each. 寫出三種板塊邊界的名稱，並畫出箭咀表示每種板塊的移動方向。

(1 mark for each correct name + 1 mark for each correct arrow)

Boundary 1: _____

Arrow: _____

Boundary 2: _____

Arrow: _____

Boundary 3: _____

Arrow: _____

Section D — Short Answers 簡答題

[15 marks]

D1. Define the word "**plate**" in one full sentence. 用完整句子解釋「板塊」。 **(2)**

.....

.....

D2. (a) Which **two parts** make up the lithosphere? (b) What do they do? 岩石圈由哪兩部分組成？它們會怎樣？ **(3)**

.....

.....

.....

D3. Describe the **THREE stages** of how the Himalayas were formed. 描述喜馬拉雅山形成的三個階段。 **(6)**

.....

.....

.....

.....

.....

Section D — Short Answers 簡答題 (continued 續)

D4. What is a **crater**? Where is it found on a volcano? 什麼是火山口？它在火山的哪個位置？ (2)

D5. Name the **other two labelled parts** of a volcano cross-section besides the crater. 除火山口外，寫出火山剖面圖上另外兩個標示部分的名稱。 (2)

Section E — Data Response 資料回應題

[6 marks]

Study the map description, then answer. 細閱地圖描述，然後回答。

Map: Active volcanoes of the world. Each black dot (●) is an active volcano. Most of the dots form a **ring around the Pacific Ocean** — along the west coasts of North and South America, through Alaska and eastern Asia, and around the western Pacific islands. Smaller groups of dots run **along the middle of the Atlantic Ocean** and **through southern Europe and Asia**.

E1. Describe the distribution of active volcanoes shown on the map. 描述地圖上活火山的分佈。 (3)

E2. Suggest why the volcanoes form a ring around the Pacific Ocean. Use a geographic word (e.g. plate, plate boundary, magma). 試解釋火山為何圍繞太平洋形成火環。用地理詞彙作答。 (3)

Study the map extract, then answer. 細閱地圖摘錄，然後回答。 Eastings 東距 run vertically (numbers increase eastward); Northings 北距 run horizontally (numbers increase northward).

	20	21	22	23	24	
36		 Mgmt centre	 Golf course			36
35		Beacon				35
34			卐 Temple	 Bridge		34
33						33
	20	21	22	23	24	

Map extract — features shown in their grid squares. Compass rose: ↑ N at top.

F1. A student stands at the **bridge**. **Step 1** of the compass method: draw a straight line from the bridge to the **temple**. After setting the compass rose at the bridge, in which **compass direction** is the temple? 站在橋上，寺廟在哪個羅盤方向？ (2)

Direction 方向：_____

F2. Give the **four-figure grid reference** of the **beacon**. 寫出訊號塔的四位網格座標。 (2)

Grid reference 網格座標：_____

F3. Give the **four-figure grid reference** of the **country park management centre**. 寫出郊野公園管理處的四位網格座標。 (2)

Grid reference 網格座標：_____

F4. A hiker at the **beacon** wants to walk to the **golf course**. In which **compass direction** should she walk? 在訊號塔的健行者想去高爾夫球場，應向哪個羅盤方向走？ (2)

Direction 方向：_____

— End of paper 試卷完 —

Answer Key 答案 (for parents / marking only — do not show Steve before he finishes!)

Section A — Fill in the blanks [14]

A1: (A) Continental crust 大陸地殼 · (B) Oceanic crust 海洋地殼 · (C) plates 板塊 · (D) plate boundary 板塊邊界 · (E) asthenosphere / mantle 軟流圈/地幔

A2: (F) apart 遠離 · (G) Tension 張力 · (H) Divergent 分散性 · (I) towards 靠近 · (J) Compression 擠壓力 · (K) Convergent 聚合性 · (L) past 擦過 · (M) Shear 剪切力 · (N) Transform 保守性 (transform)

Section B — Circle the answer [6]

B1: Tension · **B2: Compression** · **B3: Shear** · **B4: intrusive volcanism** 侵入性 · **B5: Eurasian Plate** 歐亞板塊 · **B6: eastings then northings** 先東距後北距

Section C — Draw the arrows [6] — 1 mark per correct name + 1 per correct arrow:

① **Convergent** boundary — arrows →← (plates move towards each other) · ② **Divergent** boundary — arrows ←→ (plates move apart) · ③ **Transform** boundary — arrows ↑ ↓ (plates slide past each other)

Correct answers for C1 — check arrows: →← convergent, ←→ divergent, ↑ ↓ transform.

Section D — Short answers [15]

D1 (2): "The earth's surface land mass is divided up into pieces called plates." (1 for "pieces of the earth's surface / land mass", 1 for naming them plates)

D2 (3): (a) The **crust** and the **uppermost part of the mantle** (1+1); (b) they **float and move slowly on the semi-fluid asthenosphere / mantle** (1). Also accept: crust is made of rigid rocks; continental crust is thicker, oceanic crust is thinner.

D3 (6): Stage 1 — ocean–continent collision: sediments deposited at the land margin and compacted into sedimentary rock; oceanic crust subducting under the Asian continent; volcanoes formed as magma rose through cracks (2). **Stage 2** — continent–continent collision: all the oceanic crust of the Indian subcontinent subducted; the two continents collided directly (2). **Stage 3** — rocks at the plate boundary crumpled into the Himalayas; under compressional

force, folding and faulting occurred (2).

D4 (2): A crater is a **circular depression** (1) **at the top of a volcano** (1).

D5 (2): **Vent** 火山口通道 (1) and **Magma chamber** 岩漿庫 (1).

D3 reference — Stage 1: flat layers under compression; Stage 3: layers crumpled into fold mountains.

Section E — Data response [6]

E1 (3): Active volcanoes are **mainly distributed along plate boundaries** (1), especially **forming a ring around the Pacific Ocean** — the Pacific Ring of Fire (1); smaller groups lie **along the mid-Atlantic and through southern Europe and Asia** (1).

E2 (3): Because the ring follows **plate boundaries** (1) — where plates meet, **magma can rise through cracks** to the surface (1), so **volcanoes / eruptions happen there** (1). Accept any answer using plate / plate boundary / magma correctly.

Section F — Map skills [8]

F1 (2): West 西 — from the bridge (square 2334) the temple (square 2234) lies due west (draw the line, set the compass rose at the bridge: 1 mark method + 1 mark direction).

F2 (2): 2135 — eastings 21 first, then northings 35.

F3 (2): 2136 — eastings 21 first, then northings 36.

F4 (2): Northeast / NE 東北 — from the beacon (2135) to the golf course (2236) is diagonally up-right.
